Knowledge XChanger™

General Highlights

Searching:

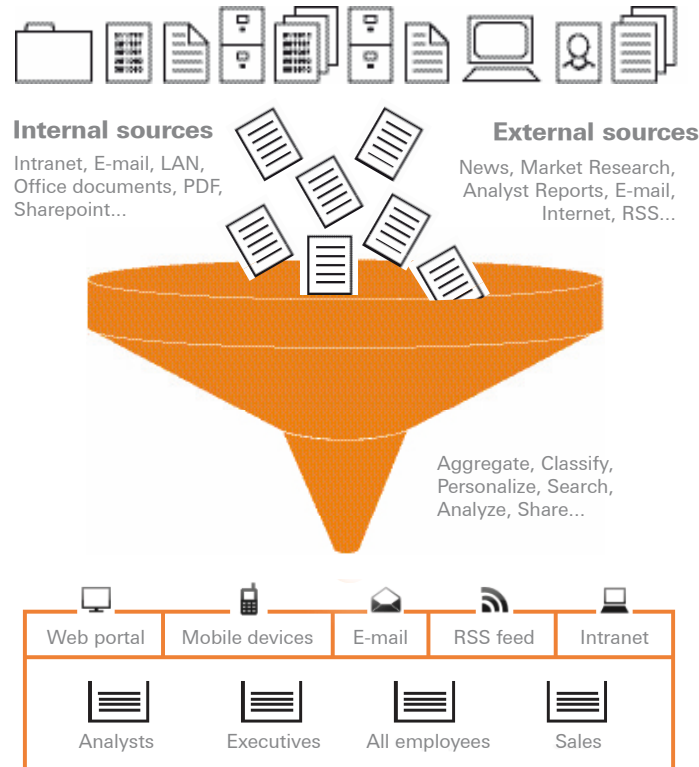

Powerful full-text search with very rapid response times. Search results can be highlighted and ranked in date or relevancy order. Searches can be refined in a number of ways, e.g. drill-down by searching within search results, faceted search within topics, search within specific dates. Offers numerous ways of fine-tuning search to suit various types of content and search needs. Users can save and subscribe to their personal favorite search queries.

Taxonomies:

The powerful automatic Classification Engine allows users to search and navigate content using taxonomies or topic maps.

Publishing:

The publishing interface allows authors to manually add content into the system using a web based word editor. It is also possible to retrieve content from other production systems via e.g. RSS. All text is stored in one common XML based format, while attachments are stored in their original format. It can easily be exported to other formats, such as RSS, PDF, Word and Powerpoint.

Market Intelligence Highlights

Matrix Analyzer:

A unique and patented analysis tool for searching, visualizing and generating reports on unstructured Information in a matrix format. "Heat maps" can be applied to the searches to easily identify hot spots. It is the first of its kind and brings powerful and dynamic analysis to the world of unstructured information, something that has previously only been associated with structured database contents.

Benchmarker:

Benchmarking is a powerful method of comparing various metrics against best practices. This function allows flexible side-by-side comparisons of profiles (e.g. companies, products, countries), where you can select not only which profiles to compare, but also exactly which data fields to compare.

Create Reports and Newsletters:

Analysis needs to be communicated effectively to the right persons in order be of any value. Knowledge XChanger™ hosts a variety of tools to support time-effective distribution of content.

Generating reports is one of these, which enables quick selection of articles to include in a report. Each report can be commented and designed before it is sent out to pre-defined lists of recipients.
